

Emory has 15 yellow beads. He wants to share the beads with 3 of his friends. Which method should he use to work out how many beads to give to each friend?

$$15 - 3$$

$$15 + 3$$

$$15 \times 3$$

$$15 \div 3$$

Emory has to share with each of his friends.

So he should divide.  $15 \div 3 = 5$
